REAL
INSIGHTS
REAL IMPACT

Executive Overview

QORBIT is an AI analytics assistant that lets business users ask data questions in plain English and receive database-backed answers without writing SQL manually.

Question It. **QORBIT.**

How QORBIT Works

FROM A QUESTION TO REAL INSIGHTS

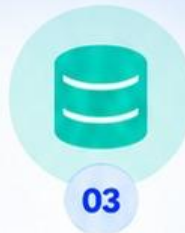

01 Ask a question in plain English

“Show me top customers by revenue for last quarter”

02 Generate safe SQL

QORBIT creates optimized, secure SQL based on your question.

03 Query approved SQL Server data

Runs the validated SQL against your secure, controlled data sources.

04 Return verified insights

Get clear answers with visual insights, backed by real data from your databases.

Secure Local LLM

YOUR DATA STAYS YOURS.

Runs on your infrastructure for maximum data privacy and control.

Profile-Based Table Access

RIGHT DATA. RIGHT PEOPLE.

Respects user permissions with intelligent, role-based access to approved tables.

Audit Logging

TRACEABLE & COMPLIANT.

Logs every question, generated SQL, and data access for full transparency and compliance.

BUSINESS PROBLEM

Data Questions, Too Many Roadblocks

Business teams face multiple challenges when trying to get answers from data.

Teams need **faster, easier,**
and secure access to data insights.

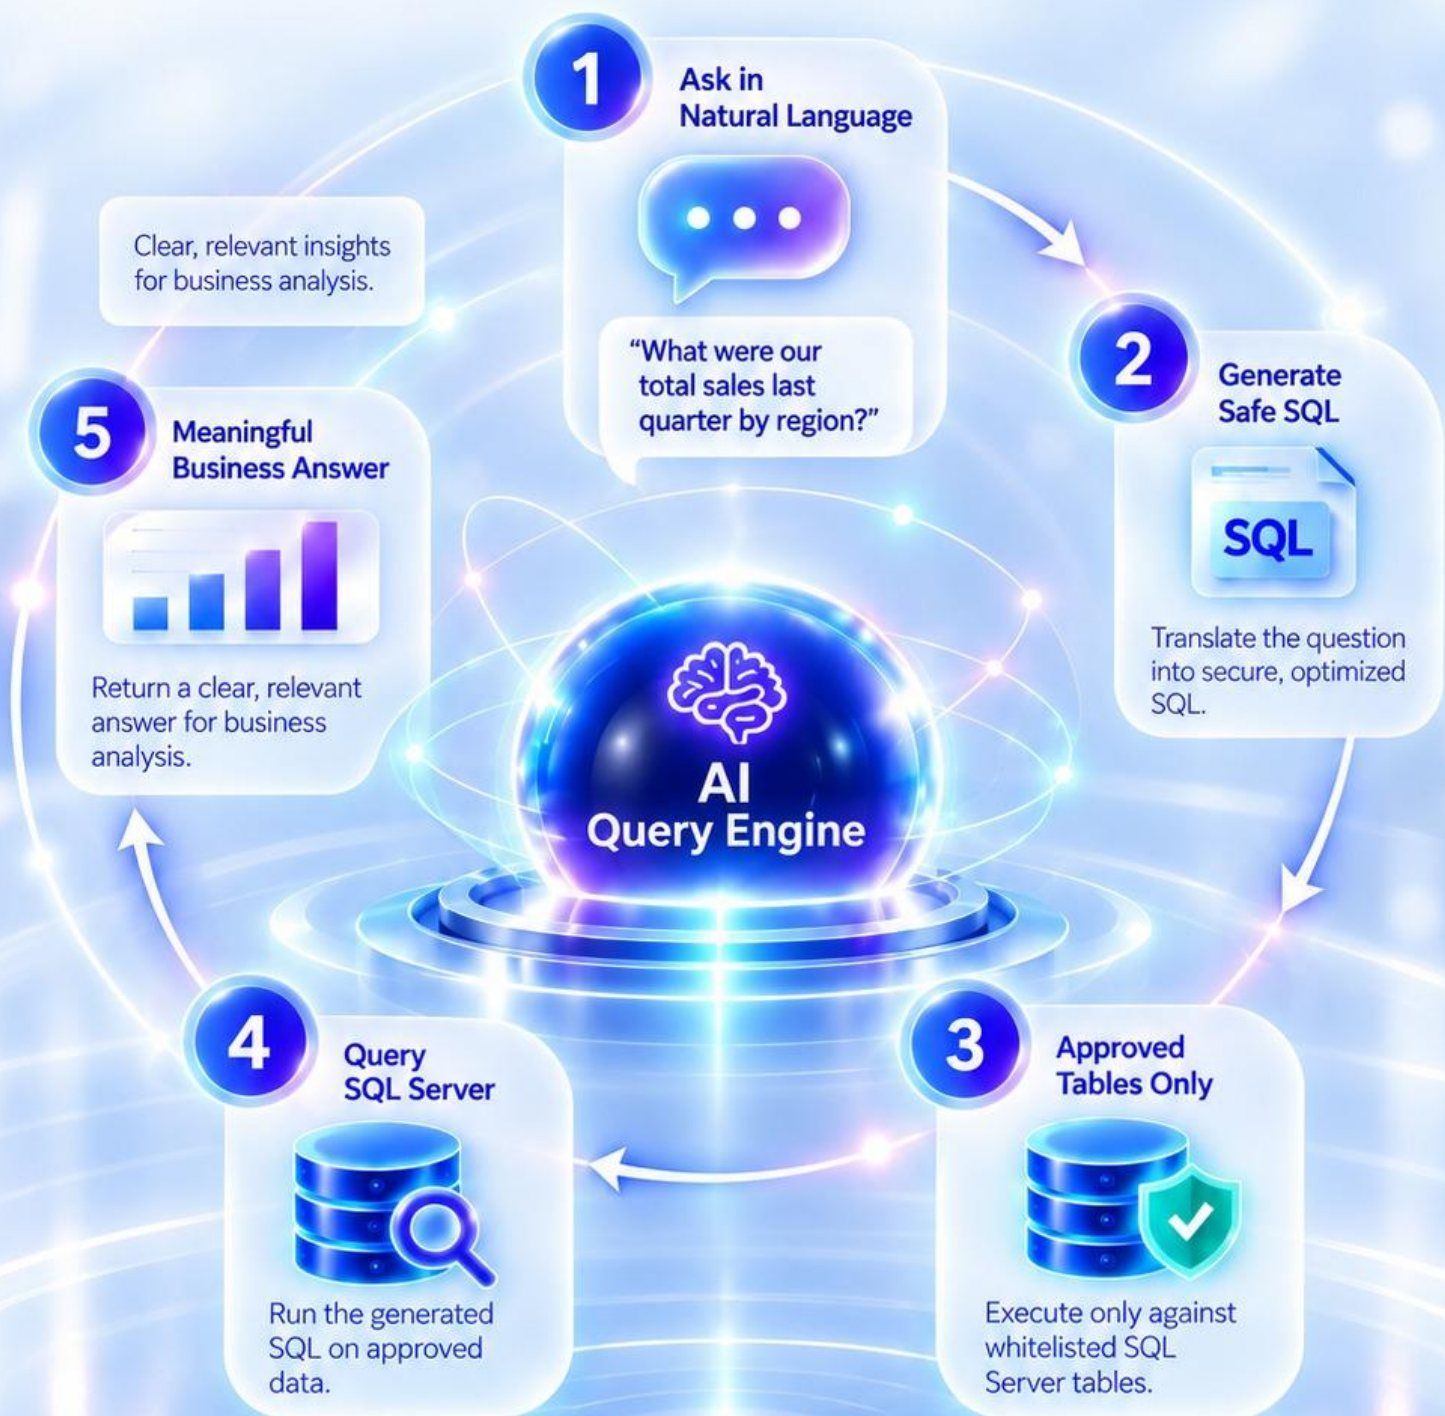

Project Objective

The Text2SQL project provides a **secure natural-language interface** for querying approved SQL Server data.

Users can ask operational questions, the system generates safe SQL behind the scenes, runs the query only on whitelisted tables, and returns a meaningful answer for business analysis.

Key Features

From Questions to Trusted Insights

Business Benefits

Faster Reporting

Reduced Operational Dependency

Improved Productivity

Reusable Platform

Secure AI Adoption

Better Auditability

Modern Client Experience

Demonstrates a practical enterprise AI system — secure, private, auditable, and connected to real SQL data to reduce reporting friction and deliver trusted business insights.
